

# Heat Mats

Great for flowers, veggies, & herbs!

Easy & great for beginners!

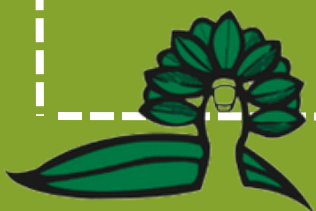

Holds a standard 10" x 20" tray

The mat warms the soil from the bottom - up! The warmth of the soil will signal the seed that it's time to grow. The soil will be warmed to approximately 80 degrees.

What are the benefits of using a heat mat?

Most seeds need warmth to germinate. When using a heat mat, you have access to an earlier growing season by starting seeds indoors when the outside temperatures are still too chilly! As soon as the danger of frost is past, you will already have strong & healthy plants that are ready to be put in the ground. This will extend your harvest and yield.
